

Press Release - November 23rd, 2006

Bruce E. Marrett is named Chief Operating Officer of CheckPhone

CheckPhone, a leader in telephony security, has announced the appointment of Bruce E. Marrett as Chief Operating Officer. Bruce Marrett, 51, a graduate of Cornell University in Ithaca, NY, spent over 28 years in executive management including: operations, product line management, finance, and marketing in the telecommunications industry. Bruce was a 21 year executive at Nortel Networks in the Wireless, Enterprise and Network Management businesses. Bruce was also a partner and co-founder of Canux Group Inc, a Private Investment and Management Company Prior to joining CheckPhone, Bruce was Co-Managing Director of a start-up Wireless Hosted Solutions business within Telcordia Technologies.

“Bruce’s proven track record in leading effective organizations and that deliver a profitable growth business, will be a great asset to CheckPhone as it grows internationally,” commented Pascal Debon, Chairman of the Advisory Board.

“Voice over IP is experiencing rapid growth with the promise of operational cost improvements and value added features. Along with these promises, come the vulnerabilities inherent in IP networks. CheckPhone is a pioneer in addressing the security concerns of VoIP while delivering features to optimize the security management organization. I look forward to working with the CheckPhone team to grow this company into a world leader in telephony security.” Marrett stated.

Bruce E. Marrett joins CheckPhone as Chief Operating Officer and has the global P&L responsibility and day to day management of the business including sales, marketing, PLM, supply chain, finance and business development.

About CheckPhone:

CheckPhone, a voice security leader, offers products and services to provide real time protection for enterprise telephony applications. The Expert Telecom Security System® (ETSS®) is a multi-vendor, multi-technology platform for VoIP, legacy PBXs and hybrid environments, enabling centralized telephony security management. CheckPhone's ETSS® is an easy to use and proactive security management tool. ETSS's® intuitive user interface enables users to efficiently establish voice security policy and then implement it throughout the network with one click. On the border, each communication is deeply inspected for policy compliance. A company's entire network configuration, modifications and logs can be tracked, analyzed and audited via a centralized management interface. CheckPhone also optimizes the enterprise's VoIP security function by providing leading edge security assessment tools and offering a comprehensive set of professional services. CheckPhone is the ideal partner to efficiently address the increased complexity of securing IP based voice communications and enabling a seamless and secure VoIP migration.
